

WHY SHOULD YOU JOIN MOSAAIC?

Too often, Asian Americans, Native Hawaiians, and Pacific Islanders have been treated as one group in research studies, despite the many differences among and between the diverse racial and ethnic groups in our communities. Your participation in this long-term health study will help us build a firm foundation of scientific knowledge, leading to better health for all and stronger and healthier communities in the future.

How Do You Join?

LET'S SHAPE A HEALTHIER FUTURE!

WELCOME TO MOSAAIC!

MOSAAIC (Multiethnic Observational Study in American Asian and Pacific Islander Communities) is a groundbreaking health research study. The health guidance that you and your families received has not always been developed with **Asian, Native Hawaiian, and Pacific Islander** communities in mind. Your participation in MOSAAIC will help us learn key health issues among our communities and support better health for you and your loved ones.

Let's shape a healthier future for your generation and generations to come.

MOSAIC | Shaping a Healthier Future

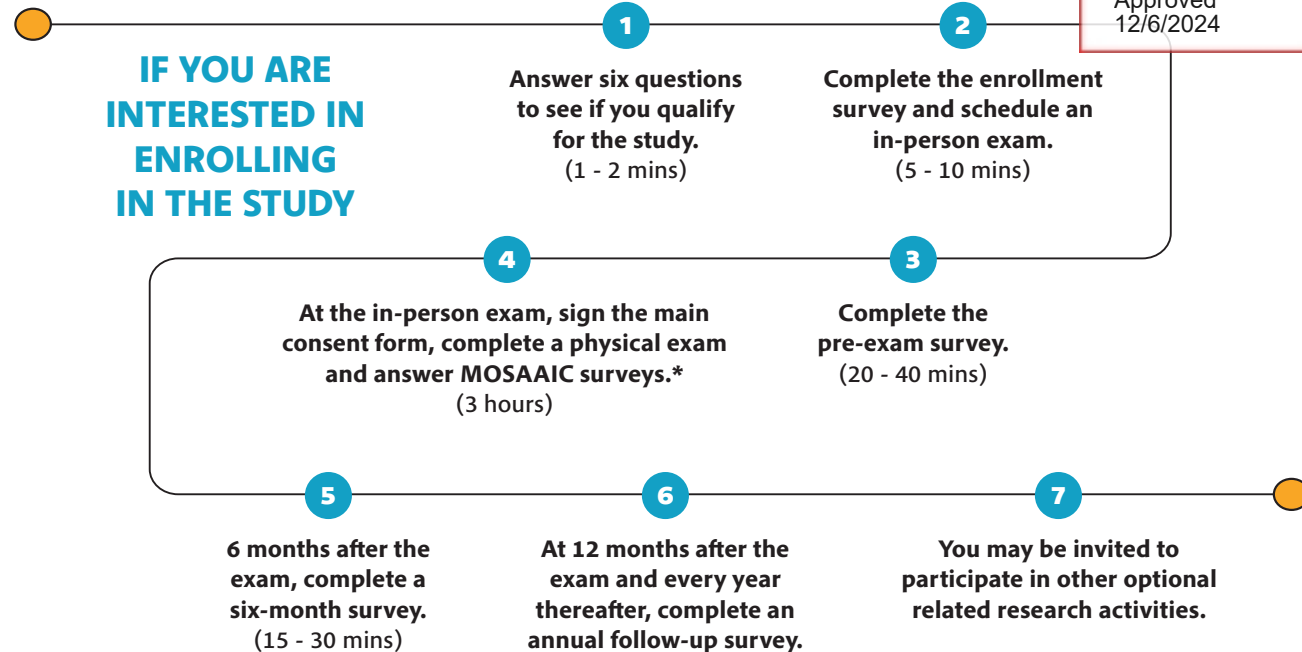

WHO IS LEADING MOSAAIC?

MOSAAIC is led by a team of health researchers dedicated to understanding the health risks and protective factors of heart, lung, and metabolic health among our communities. These diverse communities have been underrepresented in health-related studies, and MOSAAIC aims to change that.

MOSAAIC is supported by the National Heart, Lung, and Blood Institute and other agencies at the National Institutes of Health. Coordinated by the Fred Hutchinson Cancer Center, MOSAAIC brings together experienced scientists from 6 centers across the United States, including NYU Langone Health, Fox Chase Cancer Center, Temple University, the University of Chicago, Stanford University, and the University of Hawai'i, where we will work closely with our diverse communities involved in this truly landmark study.
